The results of the analysis of 96 writing samples used for this study yielded a total of 718 lexical errors, with an average number of 7.48 errors in each essay. The wrong choice of a suffix was the highest category of errors, occurring 128 times (17.83%) followed by direct translation from L1, occurring 113 times (15.74%).

033-Analysis of Lexical Errors 3 - KSU Faculty

The second section of this chapter describes how programming errors can be detected by linguistic formalisms. It explains that the front end of a compiler performs lexical, syntactic, and semantic analysis, and not all compilers find the same defects. It considers each of these forms of analysis in turn, noting defects that they can identify.

Lexical Analysis - an overview | ScienceDirect Topics

The data were analyzed using the content analysis approach. The study identified that the lexical errors in the students' writing were due to homophone problems and semantic lexical errors. The grammatical errors identified were agreement errors, tense errors, singular-plural (number) errors, prepositional errors, and article errors.

Issues in Lexical Analysis. Lexical analysis is the process of producing tokens from the source program. It has the following issues: • Lookahead • Ambiguities. Lookahead. Lookahead is required to decide when one token will end and the next token will begin. The simple example which has lookahead issues are i vs. if, = vs. ==. Therefore a way to describe the lexemes of each token is required.
