Additionally, LBA also has versatile biological activities, such as anti-bacterial, anti-oxidant, anti-obesity, anti-aging, and chelating properties (Alonso et al., 2013; Chen & Zhong, 2017; Mukherjee & Yun, 2015). Owing to its health-promoting functions, LBA could improve the safety and quality of food supplies (Chen & Zhong, 2017). Hence, LBA has potential as a novel multifunctional food additive, and understanding its antibacterial performance and mechanism will enhance its application in ...

benefits to skin. Lactobionic acid, a next-generation AHA possessing a polyhydroxy structure (a so-called polyhydroxy acid), has been shown to provide textural and smoothing benefits to skin and to increase skin thickness via digital caliper measurements, thereby providing multiple antiaging benefits.

### **Antiaging Effects of Topical Lactobionic Acid: Results of ...**

Gluconolactone and lactobionic acid are chemically and functionally similar to AHAs (such as glycolic acid). The significant difference between them and AHAs is that gluconolactone and lactobionic acid have larger molecular structures, which limits their ability to penetrate the skin, resulting in less potential for sensitizing side-effects.

### **polyhydroxy acid | Paula's Choice**

Mandelic acid is an alpha hydroxy acid (AHA) found naturally in almonds. It is more oil soluble compared with most AHAs so it's ideal for oily, acne-prone
