Polished Bore Receptacle Seal Assembly

The polished bore receptacle (PBR) and seal assembly functions as an expansion joint when extreme move-ment is expected in the production tubing. As an added application, it can be used as a separation tool for removal of the production tubing. DescRiPTion anD oPeRaTion The PBR and seal assembly is designed for two specific applications.

Polished Bore Receptacle & Seal Assembly - Schlumberger

The PBR seal bore is retrieved with a PBR retrieving tool. The Polished Seal Bore Receptacle is available in varying lengths of up to 25 ft. in stroke. An adjustable shear mechanism locks the outer housing and seal mandrel together during run- in. Once the seal assembly is released, it is free to move in the bore, compensating for tubing movement.

POLISHED SEAL BORE RECEPTACLE | American Completion Tools

The Polished Bore Assembly (PBA) consists of a no-go seal assembly pinned to a polished bore receptacle (PBR), and once sheared, provides tubing elongation and contraction capabilities. The PBA may be placed anywhere in the tubing string to provide a floating seal and maintain equivalent tubing ID. It is most commonly used

Polished Bore Assembly - Halliburton

Polished Bore Receptacle (PBR) is a device that is honed with the internal diameter of the sealing surface. It is mainly used in tieback casing and for landing a production tubing seal assembly. It is installed in a liner string to handle the liner-while-drilling service operations. It serves as the stem to isolate the hanger of the installed cementing system.

Petropedia - What is Polished Bore Receptacle (PBR ...

Product NO.: CT-91401 COMPLETION OIL TOOLS ® Polished Bore Receptacle has a honed polish seal bore which is used to tying in to liner with COT ® Tie back seal mandrel or by tie back packer. The CT-PBR also provides the extension which is later used for setting liner top packer.

Polished Bore Receptacle - COMPLETION OIL TOOLS

The polished seal bore receptacle can be retrieved in two trips. The seal assembly is retrieved when the tubing string isrecovered. The PBR seal bore is retrieved with a PBR retrieving tool. The Polished Seal BoreReceptacle is available in varying lengths of up to 25 ft. in stroke.

Polished Seal Bore Receptacle | Oil & Gas field Equipment ...

The polished bore receptacle (PBR) is a high-quality honed pipe with tight manufacturing tolerances that guarantees the best sealing properties. The top PBR end is provided with a special chamfer to enable an easier running-in of drilling tools. The lower PBR end can be optionally connected with a liner packer or setting sleeve.

Polished Bore Receptacle - NOV

Description. The Pinnacle Polished Seal Bore Receptacle (PBR) is designed for applications where a large I.D. must be maintained through the completion while accommodating extreme tubing movement. The PBR is attached to a Seal Bore Packer with the use of a Latch Seal Assembly. An adjustable shear mechanism locks the outer housing and Locator Seal Assembly together while

running.

Polished Seal Bore Receptacle (PBR) - Pinnacle Oil Tools

The seal assemblies are designed with external seals on the tubing which pack-off in the polished bore of the packer or a packer extension (used to retain the same packer bore diameter as the tubing). Basic seal units include two seal stacks, but any number of seal units can be screwed together to increase the length of the assemblies.

Seal Assemblies (Locator, Anchor, Latch) | Design | Completion

The Baker Hughes Retrievable Packer Bore Receptacle (PBR) is designed for use in those applications where a very large ID must be maintained through the completion while accommodating extreme tubing movement. The retrievable PBR can be latched into a retainer production packer or liner hanger by means of an anchor tubing seal assembly.

80-47 Packer Bore Receptacle (PBR) - Baker Hughes

Upper Polished Bore Receptacle is a polished honed bore, made specifically to receive the PBR-U seal assembly above the packer. The PBR-U seal assembly is held in place inside the honed bore during run in by a shear ring or shear screws. The seal assembly consists of three debris barriers and four seal stacks.

Upper Polished Bore Receptacle - COMPLETION OIL TOOLS

Often, a polished bore receptacle is latched into an upper end of the packer, and an appropriate seal stacks assembly is stung into the polished bore receptacle (PBR) and attached to the polished bore receptacle (PBR) via shear screws to prevent leakage between the interior of the PBR and the production tubing.

Polished bore receptacle - Schlumberger Technology Corporation

The Bakerline™ series single-string seal bore packer completion is a common and simple means of completing a well with built-in versatility and flexibility. The tubing string can be positioned into the seal bore packer in two ways. nNA locator tubing-seal assembly provides a high-pressure seal between the packer and

Bakerline Series Completion Portfolio - Baker Hughes

the bottom of the screen assembly, just above a short telltale-circulating screen. This helps insure treatment fluids are pumped all the way to the end or bottom of the production screens to promote complete screen coverage with gravel. If a polished bore receptacle (PBR) is selected, appropriately sized QUANTUM seal units must be used.

Product Sheet: Polished Bore Receptacle O-ring Seal Sub ...

The polished bore receptacle seals directly to the packer body by way of a high-performance seal. The resulting gas-tight, extrusion-resistant connection eliminates the need for a high-pressure seal. The V0-rated SwageSeal packer supports safe operations in applications up to 400°F (204°C) and 12,500 psi (86 MPa). SwageSeal high-performance

IntegraLine - Weatherford International

Run as part of the liner-running tool assembly, our packer setting tools enable transferring weight through the polished bore receptacle (PBR) to set an integral liner-top packer. Debris Protection Systems. ... Create a seal between the running string and liner.

Running Tools and Accessories | Weatherford International
