Since Bandura published his seminal 1977 paper, "Self-Efficacy: Toward a Unifying Theory of Behavioral Change," the subject has become one of the most studied topics in psychology. Why has self-efficacy become such an important topic among psychologists and educators?

Self Efficacy and Why Believing in Yourself Matters

Self-efficacy theory (SET) was first developed in 1977 by Albert Bandura. He first presented his theory in the Journal of Psychological Review. Titled "Self-Efficacy: Toward a Unifying Theory of Behavioral Change," he proposed SET as the determining force of behavior change. Clearly, behavioral change plays a big part in both nursing education and nursing care.

Self-efficacy is, according to psychologist Albert Bandura who originally proposed the concept, a personal judgment of "how well one can execute courses of action required to deal with prospective situations".. Psychologists have studied self-efficacy from several perspectives. Educator Kathy Kolbe adds, "Belief in innate abilities means valuing one's particular set of cognitive strengths.
